

SketchMarkers – Technical Data Sheet

MagPaint Europe B.V.
Riezenweg 2, 7071 PR Ulft, The Netherlands

1. Description

SketchMarkers are 2mm round tip alcohol-based markers for whiteboards and non-porous surfaces. They are available in eight colours: black, red, orange, green, blue, light blue, pink and purple. Packages of four single-coloured markers, packages of four assorted colours, or included in our SketchKit.

SketchMarkers contain a pigment, binder and solvent, just like permanent markers. The difference is the binder, which is an oily silicone polymer that will not stick to a non-porous surface. You can wipe off the dried layer of pigment, encapsulated in the oily polymer, without a trace of pigment.

2. Surface

SketchMarkers can be used on various surfaces like glass, ceramics, and whiteboards Etc. As long as the surface is clean and dry.

3. Usage

Use the SketchMarkers to write and draw on SketchPaint. Let the marker dry completely before you try to erase it, otherwise you might accidentally smudge the pigment directly onto the surface without the polymer barrier. The longer the markers are on your surface, the harder they will be to erase. Smudges and persistent marker stains can be removed with our SketchCleaner.

4. Storage

Store the SketchMarkers with the cap on, in a dry place out of reach of heat or direct sunlight.

5. Safety

SketchMarkers are Alcohol-based.

8. Specifications

Colour:	Black, Red, Orange, Green, Blue, Light blue, Pink or Purple.
Tip shape:	Round tip.
Tip Size:	2mm.
Solvent:	Ethanol and isopropanol.
